Microsoft Dynamics™ GP
Solution Overview

In today's fast-paced, information-rich environment, the decision to invest in a new business management solution is only the first step to improving flexibility and enabling integration of important areas such as finances, e-commerce, supply chain and manufacturing. Implementing a new software package can present a host of challenges, including lack of in-house resources and necessary skill sets.

At RSM McGladrey, we've helped many companies successfully implement new software packages. We provide implementation and integration support for Microsoft Dynamics™ solutions including Microsoft Dynamics™ GP (formerly Microsoft® Business Solutions-Great Plains®). Microsoft Dynamics™ GP is a comprehensive business management solution built on the highly scalable and affordable platform of Microsoft technologies. We also offer a fully hosted Microsoft Dynamics™ GP solution for organizations who prefer to outsource support of their technology infrastructure.

Implementation services for Microsoft Dynamics GP

We combine new technologies, proven methodologies and broad-based business knowledge to successfully implement Microsoft Dynamics™ GP. Our implementation model consists of four phases:

- Project planning and design
- System design and pilot
- System set-up and training
- Go live

We work with you to understand how your business currently performs, identify business process enhancements and determine how technology can be used to improve your operations. Our technology consultants provide personalized service — from planning and implementation, to customization, to ongoing support and education. In short, we're committed to being a valued business partner beyond the implementation process.

Because our organization is structured to align with industries, our consultants not only understand technology, but also have experience in several key industries including manufacturing, distribution, health care and financial services.

And unlike many other providers, RSM McGladrey offers a complete range of other business consulting as part of a full-service strategy. We provide risk management, financial management, operations and strategy consulting in addition to our technology services.

Support you can count on

For almost 20 years, RSM McGladrey has helped nearly 1,500 clients implement Microsoft-based business management solutions. We are consistently recognized as a top business partner for Microsoft Dynamics solutions. RSM McGladrey is also one of a select group of business partners included in Microsoft's Inner Circle and President's Club. As a Microsoft Gold Certified Partner, we're able to provide superior response and support services.

Make the most of your technology investment with Microsoft Dynamics GP

Microsoft Dynamics™ GP offers a cost-effective solution for managing and integrating finances, e-commerce, supply chain, manufacturing, project accounting, field service, customer relationships and human resources. It provides companies tremendous flexibility, efficiency and full integration capabilities.

Microsoft Dynamics™ GP works with and like other Microsoft products that are well known throughout businesses worldwide. That means people across your organization can use skills and products that they already know — like a web browser, Microsoft Office System products and Microsoft SQL Server — to access and communicate information managed within the system. It's easy to deploy and configure.

Financial management

Microsoft Dynamics™ GP provides detailed financial management options that range from general ledger, accounts payable and accounts receivable modules to bank reporting, cash flow management and easy reconciliation.

Employees can analyze financial data by whatever criteria they require, while the company gains an accounting solution that reflects changes instantaneously.

Analytics

Microsoft Dynamics™ GP provides a broad range of flexible, customizable analytics, reporting and budgeting options to meet your company's needs — from advanced consolidation analysis to the simplest reporting requests.

Its applications tap into the most powerful reporting, analysis and budgeting tools available — providing real-time insight into the critical information needed for smarter, faster business decisions.

Business portal

Built on Microsoft .NET technologies, Microsoft Dynamics business portal integrates with Microsoft Dynamics™ GP, so data and processes can be accessed from a Web-based portal. This lets you extend the appropriate applications, information and processes to employees, customers and partners across the enterprise, based on their unique roles.

In practice: integration leads to better service with fewer people

A lifestyle media company was eager to expand product offerings and capitalize on its multi-channel distribution approach. Doing this meant tight integration of all systems including financial, order processing and shipping systems. RSM McGladrey consultants implemented Microsoft Dynamics™ GP — a solution that went beyond integration and consolidation. It allowed the company to manage increased volume and reduce staffing levels while still maintaining high service levels.
